Theme list

- ally testing methods
- auto-test tools compared
- measuring ally

(Vigo et al., 2013)

What could be the harm in relying on automated testing? This research look at number of available automated evaluation tools and compares their output to that of a team of experts in regard to the coverage, completeness and correctness. Results show that relying on tools alone is not recommended, because even if the right tool is used only 6 out of 10 violations would be caught. Tools seem to be more effective on very inaccessible sites.

**TODO: Take a look at some concrete numbers
